Concurrent Programming on Windows

Joe Duffy

Concurrent Programming on Windows Joe Duffy

“When you begin using multi-threading throughout an application, the importance of clean architecture and design is critical. . . . This places an emphasis on understanding not only the platform’s capabilities but also emerging best practices. Joe does a great job interspersing best practices alongside theory throughout his book.”

– From the Foreword by Craig Mundie, Chief Research and Strategy Officer, Microsoft Corporation

Author Joe Duffy has risen to the challenge of explaining how to write software that takes full advantage of concurrency and hardware parallelism. In *Concurrent Programming on Windows*, **he explains how to design, implement, and maintain large-scale concurrent programs, primarily using C# and C++ for Windows.**

Duffy aims to give application, system, and library developers the tools and techniques needed to write efficient, safe code for multicore processors. This is important not only for the kinds of problems where concurrency is inherent and easily exploitable—such as server applications, compute-intensive image manipulation, financial analysis, simulations, and AI algorithms—but also for problems that can be speeded up using parallelism but require more effort—such as math libraries, sort routines, report generation, XML manipulation, and stream processing algorithms.

Concurrent Programming on Windows has four major sections: **The first introduces concurrency at a high level, followed by a section that focuses on the fundamental platform features, inner workings, and API details. Next, there is a section that describes common patterns, best practices, algorithms, and data structures that emerge while writing concurrent software. The final section covers many of the common system-wide architectural and process concerns of concurrent programming.**

This is the *only* book you’ll need in order to learn the best practices and common patterns for programming with concurrency on Windows and .NET.

From reader reviews:

Thomas Garcia:

Do you have favorite book? When you have, what is your favorite's book? Guide is very important thing for us to understand everything in the world. Each guide has different aim or goal; it means that book has different type. Some people feel enjoy to spend their a chance to read a book. They are reading whatever they take because their hobby is actually reading a book. Consider the person who don't like looking at a book? Sometime, man or woman feel need book once they found difficult problem as well as exercise. Well, probably you'll have this Concurrent Programming on Windows.

Charles Wright:

The book Concurrent Programming on Windows give you a sense of feeling enjoy for your spare time. You may use to make your capable a lot more increase. Book can to get your best friend when you getting tension or having big problem using your subject. If you can make examining a book Concurrent Programming on Windows for being your habit, you can get more advantages, like add your capable, increase your knowledge about a few or all subjects. You are able to know everything if you like wide open and read a e-book Concurrent Programming on Windows. Kinds of book are several. It means that, science guide or encyclopedia or other individuals. So , how do you think about this e-book?

Stanley Torres:

Do you one of people who can't read pleasurable if the sentence chained from the straightway, hold on guys this specific aren't like that. This Concurrent Programming on Windows book is readable by you who hate the perfect word style. You will find the info here are arrange for enjoyable looking at experience without leaving also decrease the knowledge that want to deliver to you. The writer of Concurrent Programming on Windows content conveys objective easily to understand by lots of people. The printed and e-book are not different in the content but it just different as it. So , do you nonetheless thinking Concurrent Programming on Windows is not loveable to be your top listing reading book?

Brian Scheele:

Information is provisions for individuals to get better life, information nowadays can get by anyone with everywhere. The information can be a know-how or any news even a concern. What people must be consider if those information which is within the former life are hard to be find than now is taking seriously which one would work to believe or which one the actual resource are convinced. If you find the unstable resource then you have it as your main information there will be huge disadvantage for you. All of those possibilities will not happen inside you if you take Concurrent Programming on Windows as your daily resource information.
