Supercritical Fluid Technology for Energy and Environmental Applications

Supercritical Fluid Technology for Energy and Environmental Applications covers the fundamental principles involved in the preparation and characterization of supercritical fluids (SCFs) used in the energy production and other environmental applications. Energy production from diversified resources - including renewable materials - using clean processes can be accomplished using technologies like SCFs. This book is focused on critical issues scientists and engineers face in applying SCFs to energy production and environmental protection, the innovative solutions they have found, and the challenges they need to overcome. The book also covers the basics of sub- and supercritical fluids, like the thermodynamics of phase and chemical equilibria, mathematical modeling, and process calculations.

A supercritical fluid is any substance at a temperature and pressure above its critical point where distinct liquid and gas phases do not exist. At this state the compound demonstrates unique properties, which can be "fine-tuned," making them suitable as organic solvents in a range of industrial and laboratory processes.

This volume enables readers to select the most appropriate medium for a specific situation. It helps instructors prepare course material for graduate and postgraduate courses in the area of chemistry, chemical engineering, and environmental engineering. And it helps professional engineers learn supercritical fluid-based technologies and use them in solving the increasingly challenging environmental issues.

- Relates theory, chemical characteristics, and properties of the particular supercritical fluid to its various applications
- Covers the fundamentals of supercritical fluids, like thermodynamics of phase and chemical equilibria, mathematical modeling, and process calculations
- Includes the most recent applications of supercritical fluids, including energy generation, materials synthesis, and environmental protection

From reader reviews:

Robert Frye:

Do you one of people who can't read satisfying if the sentence chained in the straightway, hold on guys that aren't like that. This Supercritical Fluid Technology for Energy and Environmental Applications book is readable by you who hate the straight word style. You will find the information here are arrange for enjoyable reading through experience without leaving possibly decrease the knowledge that want to deliver to you. The writer of Supercritical Fluid Technology for Energy and Environmental Applications content conveys thinking easily to understand by a lot of people. The printed and e-book are not different in the written content but it just different available as it. So , do you nevertheless thinking Supercritical Fluid Technology for Energy and Environmental Applications is not loveable to be your top collection reading book?

Barbara Mobley:

Typically the book Supercritical Fluid Technology for Energy and Environmental Applications has a lot associated with on it. So when you check out this book you can get a lot of benefit. The book was compiled by the very famous author. Mcdougal makes some research prior to write this book. This specific book very easy to read you will get the point easily after reading this article book.

Barbara Morton:

The reason? Because this Supercritical Fluid Technology for Energy and Environmental Applications is an unordinary book that the inside of the e-book waiting for you to snap the item but latter it will shock you with the secret this inside. Reading this book adjacent to it was fantastic author who else write the book in such wonderful way makes the content within easier to understand, entertaining method but still convey the meaning totally. So , it is good for you for not hesitating having this ever again or you going to regret it. This book will give you a lot of advantages than the other book get such as help improving your proficiency and your critical thinking way. So , still want to delay having that book? If I ended up you I will go to the e-book store hurriedly.

Christopher Arnold:

Beside this Supercritical Fluid Technology for Energy and Environmental Applications in your phone, it can give you a way to get more close to the new knowledge or facts. The information and the knowledge you may got here is fresh from oven so don't possibly be worry if you feel like an older people live in narrow town. It is good thing to have Supercritical Fluid Technology for Energy and Environmental Applications because this book offers to you readable information. Do you at times have book but you would not get what it's facts concerning. Oh come on, that would not happen if you have this within your hand. The Enjoyable agreement here cannot be questionable, like treasuring beautiful island. So do you still want to miss it? Find this book in addition to read it from currently!
